

AI-Assisted Chest X-ray Report

Prediction Summary

Predicted Class: PNEUMONIA

Confidence Score: 87.60%

Imaging Review

AI-generated Report

The AI system classified the chest X-ray as 'PNEUMONIA' with a confidence score of 87.60%.

The model associated this image with a pattern labeled 'PNEUMONIA' and assigned high confidence to that pattern. In educational terms, this suggests the network detected image features that can be seen in chest X-rays with inflammatory or air-space opacity. The output does not establish the cause, severity, or clinical context.

Grad-CAM highlighted the upper-center region most strongly, with a peak activation of 100.0% and elevated attention across 11.0% of the image. This visualization reflects where the model focused during classification, not a confirmed site of disease.

Correlate this result with symptoms, vital signs, prior imaging, laboratory data, and formal review by a licensed clinician or radiologist.
